PROFESSIONAL SUMMARY

Detail-oriented and versatile QA Engineer with solid experience in end-to-end software testing (Manual, Regression, UI/UX, API) and data validation. Proven track record in Agile environments orchestrating the full defect lifecycle using Jira, acting as a crucial defect finder, and ensuring backend data integrity via SQL. Combines core manual testing expertise with data analytics skills to deliver robust, high-stability software deployments.

TECHNICAL SKILLS

Testing & QA:	Manual Testing, Functional & Regression Testing, UI/UX Testing, API Testing (Postman), User Acceptance Testing (UAT), Test Case Design, Bug Life Cycle Management
Tools & Process:	Jira, Agile/Scrum, SDLC/STLC, Command Line Interface (CMD)
Database Validation:	SQL (MySQL/Postgres), Data Migration Validation, Backend Verification
Analytics & Scripting:	Python (Pandas), Power BI, Tableau, Advanced Excel, Data Visualization

WORK EXPERIENCE

Manual Tester Harjai Technologies	April 2025 – Present
Product Testing: Spearheaded testing for 3+ new insurance products, managing comprehensive functional and deep-dive regression testing suites to validate new system requirements. Module Testing: Executed end-to-end test scenarios across 10+ core operational modules, including critical finance transactions and retail refund processing workflows. Production Support: Conducted thorough production issues testing and live deployment support to isolate software anomalies and deliver rapid verification fixes. Defect Identification: Recognized as a crucial defect finder by leveraging precise test case design and destructive testing methodologies to uncover high-severity edge cases before release. Defect Management & Verification: Orchestrated the full defect lifecycle using Jira, managing technical API validation via Postman and deep-dive backend validation using SQL queries.	
Data Analyst Intern Labmentix	Feb 2025 – May 2025
- Worked closely with SQL databases to extract, clean, and validate large datasets to ensure complete reporting and data accuracy. - Automated reporting workflows using advanced Excel formulas and Power Query to streamline data operations.	

- Developed interactive dashboards using Power BI and Tableau to track key operational KPIs, improving weekly reporting efficiency by 10%.

PROJECTS

DevEnviroSmart Solutions | QA & Manual Testing

- Conducted end-to-end manual testing for an enterprise platform, designing, writing, and executing 50+ functional, integration, and UI test cases.
- Performed thorough backend validation using SQL queries to ensure accurate data consistency across database schemas.

LogiLens | Supply Chain Data Analysis & Optimization

- Engineered interactive Power BI dashboards to visualize and analyze delivery performance KPIs, identifying bottlenecks to optimize logistics and supply chain workflows.

TATA Machine Failure Prediction | Machine Learning & Analytics

- Developed a predictive classification model using Python to identify potential industrial equipment failures, reducing operational downtime through data-driven insights.

EDUCATION

Bachelor of Information Technology

Graduated: June 2024

CGPA: 9.05 | Key Coursework: Software Project Management, Data Analytics
